

Climate Change Solutions Research

Once you have picked one of the five topics to research into, fill out the chart below to help you organize your research into this topic. All answers should be in your own words but don't have to be complete sentences unless you want to write them that way.

Question	Your Answer	Your Source
Describe the solution in detail. (what does it do, how does it work, etc.)		
What technology is needed for this solution to work? (ideas, machines, etc.)		
How easy is this solution? (Cost, knowledge needed, time required, etc.)		
Do you think this solution could help climate change? Why or why not?		

Now that you have a good background on this solution, create a CER about it. Your claim would be either “_____ would help climate change” or “_____ would not help climate change.” Then give five pieces of evidence to support your claim. Finally, tell how your evidence proves your claim in the reasoning part of your CER. The reasoning part should be in paragraph form.

Claim: _____

Evidence
