

Cell Project

For this project, compare the parts of a cell listed below to the parts of a city of your choice. You can choose to create your city based on a modern day city, an ancient city, a specific city you know well, or make up your own city.

Include:

- All the parts of a cell talked about in class: cell membrane, lysosomes, cytoplasm, nucleus, nuclear membrane, ribosomes, endoplasmic reticulum, golgi bodies, mitochondria, vacuoles, cell wall and chloroplasts.
- Colored drawing of your city with labels of each part
- A key on your drawing paper with which part of the city is which part of the cell and a description why the analogy works
