# Types of Mixtures

— Take pictures and describe  
the two types of mixtures. —

---

---

# Instructions:

Go around your room, house, and even outside if allowed to gather examples of homogeneous mixtures and heterogeneous mixtures.

Come back here to then take pictures of your mixtures and then describe WHY they are either homogeneous or heterogeneous mixtures.

You should have at least three pictures and descriptions of each type of mixture. If you need to add more slides that is okay.

# How to add a picture to a slide

## (instructions in case you need them)

Click on the Insert button above. Hover over Image and click on Camera.

Hold up your mixture and take a picture!

Then you can rearrange the picture however you wish on your slide.

# Homogeneous Mixtures

(This is where your descriptions of why these are homogeneous mixtures go while the pictures should be on the right)

# Heterogeneous Mixtures

(This is where your descriptions of why these are heterogeneous mixtures go while the pictures should be on the right)
